

## Datasets\_from\_Text\_File Readme

Before running this script, the "BusinessCard1.ai" (from the InputFiles folder) should be open in Illustrator.

The "Export" folder must be maintained in the same folder as the .exe or .vbp file.

After the script is launched, use the drive and file list boxes to select the "cards.txt" file. This file contains the data that will be displayed in "BusinessCards1.ai".

After selecting the "Batch" button, the following will occur:

1. Data will be read from "cards.txt" and an XML file will be created. The XML file will be created in the "Export" folder.
2. The dataset and variable information in the XML file will be imported into the "BusinessCard1.ai" file.
3. Each dataset will be displayed and exported as a GIF file. The resulting .gif files will be located in the "Export" folder.
